1500s S’pore at the heart of economic hub of region

This is the third of six weekly articles covering the Singapore History Series – Seven Centuries In Six Episodes, organised as part of the SkillsFuture Festival in collaboration with the Singapore Bicentennial Office

It is durian season, and these days, there are many ways to satisfy your craving for the king of fruits – including having it delivered to your doorstep.

Traders plying the waters of early Singapore also enjoyed a similar service, thanks to the orang laut – or “sea people” in Malay – who would paddle up to their vessels, in small, narrow boats, tossel the fruit.

The last ships that lived on the coastlines and waterways also had on offer refreshing mangosteen – a popular fruit eaten with the “hearty” durian – as well as fish, live chickens, fresh water and palm leaf pursals, among other things.

The waters of 15th century Singapore and its surroundings were at the centre of historian Peter Borschberg’s lecture last Thursday at Fort Canning Centre.

Speaking to The Straits Times in the lead-up to the talk, Associate Professor Borschberg from the National University of Singapore said: “The orang laut frequenting the straits are known to have served as pilots and petty merchants.

“In their role as pilots, they guided passing ships through the dangerous waters around the island. “As merchants, they would pull up to trade goods, and goods.”

Flemish gem trader Jacques de Coutre captured some of the life and times of the orang laut in his memoirs.

De Coutre’s work is one of a number of European records Prof Borschberg presented during the lecture to debunk the misconception that Singapore had plunged into silence and become insignificant after the Portuguese invaded Melaka in 1511.

The Portuguese, after all, are on record as having destroyed Singapore likely around 1511 to the 1550s, during their naval campaigns against Bantam or later against Johor.

The sources Prof Borschberg studied paint a different picture of Singapore – portraying it as an island at the epicentre of active economic activity.

European economic maps mark out gold, copper and tin mining activities, as well as a flourishing timber and shipbuilding industry on the Malay peninsula, and the nearby islands, including Sumatra. There was also a food-processing industry that included the drying and salting of fish, as well as the pickling of fish eggs, which was a delicacy among the Malay elites of the time.

Some maps also sketched out overland and maritime trade routes in the region. Singapore’s depiction as an island in the greater Johor River estuary reveals that Singapore functioned as a gatekeeper of the Johor River. Singapore and its straits were, thus, well known and charted by the Europeans, said Prof Borschberg.

Singapore also functioned as a base for the fleets of Melaka and Johor. Prof Borschberg said: “Ships would have called here, declared their goods, and, in the case of larger, ocean-going vessels, would have shifted cargo onto or out of smaller vessels.”

The head of port and storage operations would have been the shahbandar, or port master, who was posted to Singapore by the king of Johor. He managed Singapore’s port affairs, including Customs duties, the administration of royal monopolies, and was responsible for resolving disputes between foreigners and locals.

A number of European merchants visited Singapore’s shahbandar. Among them were de Coutre, and Dutch admiral Cornelis Matelief. De Coutre described Singapore as one of the “best ports that serve the (East) Indies.”

Even after the tragic events of 1511, one of the four great lords of Melaka – a sea admiral known as the lakuman – resided in Singapore.

Blue-and-white Chinese porcelain remnants, dating between 1573 and 1620, and which were recovered from Kallang River in the late 1960s and early 1700s, are evidence of Ming trade having taken place here during the 1500s.

Concluding his talk, which was attended by more than 100 people, Prof Borschberg said the curtain never fell on 16th century Singapore. Instead, it underwent cycles of destruction and reconstruction which continued into the 17th century.

“Singapore served different functions at different times and had even been singled out as a place to acquire, fortify and colonise by the early European powers.”
